WOLF

NO ROOM FOR VIRUSES - IMMEDIATE ASSISTANCE FOR HYGIENICALLY CLEAN AIR

The current coronavirus pandemic poses extreme challenges to our society and our economy.

Fast and highly efficient solutions are now required that can enable society to continue functioning safely during the coming months.

WOLF offers the AirPurifier - certified as the quietest solution in its performance class - as the optimal solution for fast, uncomplicated and effective installation in rooms where people meet and where normal intermittent ventilation is impossible or insufficient. For classrooms, kindergartens, day-cares, restaurants, conference rooms, event locations, offices, medical clinics, pharmacies, fitness studios and retail stores.

The AirPurifier is ideal for a wide range of applications.

For protecting students, customers, guests, patients, staff and their families.

The installation of multiple devices is also no problem for use in larger rooms. Unpleasant odours are also eliminated by the special prefilter.

WHAT IT CAN DO - ALL ADVANTAGES AT A GLANCE

Effective separation as per DIN EN 1822 of > 99.995% of the particles, such as bioaerosols (viruses, bacteria) and other harmful substances with **HEPA H14 high-performance filters**.

Filter change indicator per filter, including test function.

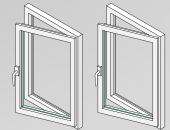

High air filtration rate of 4-6x room volumes** thanks to state-of-the-art **EC fan technology** (up to 1,200 m³/h).

Odour neutralisation thanks to initial stage with **activated carbon hybrid filter**.

Air outlet at 2.30 m protects people from uncomfortable draughts and ensures optimal distribution of the filtered air throughout the room.

Super-quiet operation - sound pressure level* of 34 dB[A] (in normal operation).

Boost function for increased air circulation. The boost mode increases the airflow in the room. This further improves the effectiveness of ventilation with open windows.

Presence detection with run-on time to avoid unnecessary operation on nights or weekends.

More advantages:

- > Plug&Play: Connects to a 230 V socket; practical 3 m power cable; no building alterations required; simple, one-time configuration for the room size
- > Safe: Tip safety thanks to prepared wall mounting
- > User-friendly: Simplest possible operation with just 3 modes (normal, auto and boost mode)
- > Combinable: Significantly larger rooms can be served with multiple units
- > Energy-efficient: Low power consumption of just 40-275 W
- > VDI 6022 compliant: State-of-the-art hygiene in compliance with requirements for air handling systems and appliances

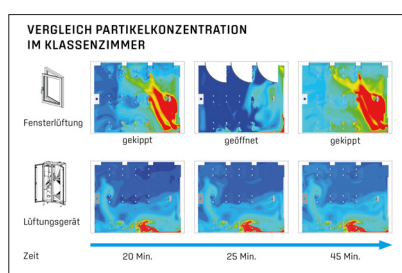

**Calculated room volume of 200 m³ (80 m² area and 2.5 m height)
